

# Tutorial

 this tutorial uses a fictional language txt where we show the possibilities of the project generator. It is up to the users of this tool to fit this tool into their programming language and own frameworks.

This tutorial assumes you are familiar with at least the basics of programming and how to set up a database.

## Steps

- [Create a sql database](#)
- [Define the fictional language txt](#)
- [Connect to sql database with ProjectGenerator](#)
- [Create a template map](#)
- [Create a txt project](#)
- [Link it all together in ProjectGenerator](#)
- [Template pseudocode examples](#)
