

Exercise 2: project - table maps

 `_project_/ex02/_table_/ex02_table_.txt` in the metacode project map

execute the code generation after each step and watch the result in the destination project

In this exercise we create

- a map named after the database name
- a map `ex02`
- a map for each table inside `ex02`
- a file for each table in this table map

add a new map with following name

```
_project_
```

open the `_project_` map, and add a new map with following name

```
ex02
```

open `ex02` map, and add a new map with following name

```
_table_
```

open the `_table_` map, and add a file name `ex02_table_.txt`

add this code (see exercise 1 for more details)

```
Table :Table:
:repeataallfields:
:columntype: :column:
:repeataallfields:
:repeattables:
```
