

Metacoder

Project Objectives

Code generation based on a relational database and database metacode.

Being database and program language independent.

Project highlights

- possibility to adapt to any kind of relational database
- working with programming templates, which opens up the possibility to work with any programming language and framework

The project is currently used in the past with following databases:

- Postgresql - versions 7 to 12
- MS SQL Server - versions 7 to 14
- MySQL - versions 5 to 8
- Oracle - Oracle 10g

The project is used to produce code for these programming languages and frameworks

- JavaEE
- JavaFX
- Ember.js
- Angular 2
- React
